Committed liars only: neither protocol beats the judges with no argument

Each point: one agent, pooled over 9 judges and 300 random testbed items, 95% item-bootstrap interval. Line and shaded band: least-squares fit and its 95% bootstrap band (resampling items and agents). Gray tick: the judges with no argument. No agent takes part; it sits at the agent whose committed items it is computed on. Bottom row: the point minus the no-argument judges, item by item; below 0 means the protocol moved the judges away from the truth.

agent (committed liars), with fit and 95% band
GPT-5.6 Sol, effort none → high
fit with all prompted liars (the blue line of Fig 12)
judges with no argument, on the items that agent's liars committed on
bottom row: agent whose liars commit ≥ 90% (cleanest)

Simultaneous debate (self-play)

Consultancy (one argument)
