Across agents, honesty's edge barely changes with intelligence, and neither protocol beats the judges with no argument

Each point: one agent, pooled over 9 judges and 300 random testbed items, 95% item-bootstrap interval. Line and shaded band: least-squares fit and its 95% bootstrap band (resampling items and agents). Gray tick: the same items judged with no argument. Bottom row: point minus tick, item by item; below 0 means the protocol moved the judges away from the truth.
